

Boston Medical Group's RejuvaPulse™ Therapy Launches Nationwide

Revolutionary Sound Wave Technology That Improves Male Sexual Performance

Laguna Hills, CA, Oct. 2018: Boston Medical Group (BMG) has introduced a revolutionary treatment for erectile dysfunction (ED) called RejuvaPulse™. This exciting new therapy uses low-intensity *pulsed* sound waves to reverse the symptoms of ED and was born out of clinical research conducted over a decade.

Erectile Dysfunction is primarily caused by reduced blood flow and degenerative changes in the penile tissue. Scientists have discovered that *pulsed* sound waves, when applied to damaged tissue, can cause a release of growth factors which helps repair the damaged tissues. It also stimulates the growth of new blood vessels and rejuvenates local tissues. Through the collective experience of their physicians across the globe, Boston Medical Group has successfully produced a treatment protocol specifically formulated for men with ED. RejuvaPulse™ Therapy actually treats the underlying causes of ED without drugs or surgery.

RejuvaPulse™ Therapy, technically termed *Extracorporeal Shockwave Therapy (ESWT)*, is quickly becoming the preferred treatment option for men who seek a long-term solution without the common side-effects or risks often associated with ED medications.

A study published in *Therapeutic Advances in Urology*, concluded that *“Shockwave Therapy [i.e., RejuvaPulse™] is a **revolutionary** treatment for ED, and possesses **unprecedented** qualities that can **rehabilitate** erectile tissue. The clinical improvement in erectile function together with significant improvement in blood flow confirm that Shockwave Therapy has unique properties that may **create a new standard of care** for men with ED”*

“While oral ED medications such as Viagra or Cialis can provide temporary relief to some men, RejuvaPulse™ Therapy actually treats the root cause of ED,” says Dr. William Livingston, Board Certified Urologist with Boston Medical Group. *“RejuvaPulse™ is completely non-invasive and it has no side-effects. After a series of six to twelve treatments of about 20 minutes each, RejuvaPulse™ results in stronger erectile function and increased responsiveness to sexual stimulation. I now recommend it to all ED patients as first-line therapy”*

At Boston Medical Group, our physicians find that RejuvaPulse™ not only helps men with erectile dysfunction **achieve spontaneous erections**, but it can also help **any** man improve his sexual performance. Further, RejuvaPulse™ works synergistically with Platelet Rich Plasma (PRP) and Stem Cell Therapy to deliver even more successful results to men who have severe ED that is unresponsive to other ED treatments.

About Boston Medical Group: Boston Medical Group (BMG) is a global alliance of medical centers sharing research information and treatment methods for male sexual dysfunction. BMG offices can be found in locations across the United States and even around the world.
